

## Time-Compression Technologies

### Sign up now for TCT and MM

Registration is now open for TCT 2008, the only UK event focused on rapid product development and rapid manufacturing technologies. The event takes place on 21 and 22 October at the Ricoh Arena, Coventry, and is joined by a new sister event – MM Live – that concentrates on the fast-moving and upcoming area of micro manufacturing. Both events are free of charge to visitors and are complemented by the influential TCT rapid manufacturing conference.

Free of charge seminar sessions will take place on both days of the show, these seminars will be held in purpose-built theatres within the exhibition halls and will cover topics such as 'Introduction to rapid technologies', 'Rapid machining technology for the jewellery industry', and 'Technology overview of micro manufacturing'.

For more information visit [www.tctshow.com](http://www.tctshow.com) and [www.micro-show.com](http://www.micro-show.com)

#### Exhibitors at TCT include:

**Midas Pattern Company**, a specialist in low-volume precision polyurethane moulding, is showcasing its new moulding process, FLEXrim™, for the rapid prototyping of high quality, heavy section, "rubber" type mouldings.

FLEXrim™ uses an enclosed mould process to prototype large items such as floor mats, bumpers, infills and over-mould applications, quickly and cost effectively. The flexible mouldings can weigh up to 30kg, in sizes up to 2m x 1m. Undercuts and wall thickness

from 6mm to 25mm, can be accommodated and mouldings can be painted to replicate in-mould textures.
